Create Easy, Intuitive & Accurate Financial Reports

Microsoft® Business Solutions for Analytics-FRx® was built to fulfill the market need for easy, intuitive and accurate financial reports by providing a more controlled and automated financial reporting process. By pulling information already established in a company's general ledger, it automatically understands fiscal periods, chart of accounts, detail transactions and various types of balances. It even recognizes debit and credit balances, along with posted and unposted transactions. Accounting and financial professionals can use one of many customizable sample reports, modify it with their company's information, and quickly get started creating relevant financial reports right away.

Microsoft Business Solutions for Analytics-FRx can help everyone in an organization become more productive and effective. It makes it easy to provide comprehensive, timely and relevant financial reports with up-to-the-minute information on a scheduled basis or whenever financial data is requested. Users can securely "drill-down" to transaction level detail, perform necessary analysis, and make better, more informed decisions based upon their company's present financial picture.

As a company's financial reporting needs become more sophisticated, choose from several additional FRx modules to enhance configuration and optimize performance.

Infor ERP SyteLine FRx® Report Designer

Infor ERP SyteLine FRx Report Designer allows financial professionals to create, generate, and maintain boardroom-quality financial reports from the convenience of their desktop, without the assistance of their IT department or a database professional. Powerful and flexible Row Format, Column Layout, and Reporting Trees building blocks ensure that all relevant account information from a variety of data sources is contained within their reports, and that they can quickly and easily respond to changes in their business. Simple drop-down menus provide output options to a variety of popular formats, such as FRx DrillDown Viewer™ files, Microsoft® Office Excel 2003 spreadsheets, Microsoft OLAP cubes, and HTML or ASCII text files. Publish reports created in FRx to XBRL (Extensible Business Reporting Language) "instance documents".

Infor ERP SyteLine FRx Report Designer is recommended for finance professionals who need to create, generate, and distribute financial reports on a regular basis.

Consolidate reports by combining information from multiple organizations, environments and servers

Generate financial reports without the need for database expertise

Stay on top of industry trends with detailed and flexible financial reports

Generate the financial knowledge necessary to comply with regulatory standards and gain a competitive advantage

Infor ERP SyteLine FRx® Report Launcher

Infor ERP SyteLine FRx Report Launcher helps finance professionals and executives select pre-existing reports, specify output options, and generate the reports they need on an on-demand basis. Users are able to click or "drill down" to the transaction detail level while maintaining the format and integrity of the original report design.

Infor ERP SyteLine FRx Report Launcher is recommended for executives, managers, and professionals who need quick access to up-to-date information contained in commonly used, previously created reports.

Infor ERP SyteLine FRx® DrillDown Viewer™

Infor ERP SyteLine FRx DrillDown Viewer allows users to review detailed reports while working online or offline, without accessing the general ledger or company network. By "drilling down" on a report row, users can access multiple layers of information – down to the transaction-level detail – giving them greater insight to the numbers. Infor ERP SyteLine FRx DrillDown Viewer files contain easy-to-understand, non-modifiable reports that simplify the analysis of performance by company, individual department, or division, or against goals and budget. Reports can be printed or forwarded to others, and the data can be output to FRx instant!OLAP® or Excel for further graphing and analysis.

Infor ERP SyteLine FRx DrillDown Viewer is recommended for executives and managers across the organization who make decisions based on the financial performance of the company.

Infor ERP SyteLine FRx® Report Manager

Infor ERP SyteLine FRx Report Manager makes it easier to pull together all the documents finance professionals need to deliver customized, comprehensive financial information to recipients across their organization. A clear simple user interface guides users through the report-book creation process in a few logical steps, making the creation, organization, and distribution of their company's financial information a smooth process. Multiple output types – including Infor ERP SyteLine FRx DrillDown Viewer files, Microsoft Office documents, and other reports produced from diverse reporting applications – can be packaged together in a report book, then e-mailed, posted to a network or to Infor ERP SyteLine FRx WebPort, or printed for manual distribution.

With security settings applied at both the user and group levels, report-book recipients receive only the information appropriate to their jobs. Information is presented in the order they want the financial story to unfold, and headers, footers, and page numbers are conveniently carried throughout, making it easy for users to quickly find the information they are looking for. Report-book templates can be named and saved for use again and again, and by resetting the reporting period dates, FRx reports will automatically regenerate and populate the latest report book with up-to-the-minute information each time.

I discrete manufacturing

Infor ERP SyteLine FRx Report Manager is recommended for finance professionals who are responsible for the production and distribution of boardroom-quality report packages containing information from multiple sources.

Infor ERP SyteLine FRx® Report Server

Infor ERP SyteLine FRx Report Server helps finance professionals automate the production of reports they run and distribute on a regular basis. Reports can be scheduled to run overnight or during off-peak hours, resulting in minimal impact on their server resources. Users can also select when and how specific reports should be generated and distributed – via e-mail (in a compressed and encrypted DrillDown Viewer file), published to the Web, or in a shared directory. And by sending their reports to the Infor ERP SyteLine FRx Report Server for processing and distribution, their workstation is available for other projects. Finally, users can add additional Infor ERP SyteLine FRx Report Server engines to their configuration, allowing them to generate multiple reports at the same time. (One additional report at a time per engine, four engines maximum.)

Infor ERP SyteLine FRx Report Server is recommended for finance professionals who need to schedule the generation and distribution of financial reports. In most cases, one Infor ERP SyteLine FRx Report Server is adequate; however, additional Infor ERP SyteLine FRx Report Server engines can enhance a production environment significantly, if you need to produce large or complex financial reports simultaneously.

Infor ERP SyteLine FRx® WebPort

Infor ERP SyteLine FRx WebPort allows users to quickly publish, store, and manage FRx reports and non-FRx documents on a security-enhanced Web site. Authorized users can access the Infor ERP SyteLine FRx WebPort Web site using only a Web browser. No additional hardware or software is required. Access requires log-in, and additional security can be set at the Reporting Tree level, ensuring that each recipient can access only the information appropriate to their job responsibilities. Users can drill down to access multiple layers of detail down to the transaction level, and advanced printing options allow them to print the presentation-quality report containing only the information they need.

Infor ERP SyteLine FRx WebPort is recommended for finance professionals with Infor ERP SyteLine FRx Report Designer or Infor ERP SyteLine FRx Report Launcher licenses who frequently distribute financial reports and related information to large, geographically dispersed audiences. A set number of Infor ERP SyteLine FRx WebPort viewing licenses are included with Infor ERP SyteLine FRx WebPort; however, additional licenses may be required to ensure that all executives and managers can gain quick access to important information around the clock.

Infor ERP SyteLine FRx® Currency Translation

For companies that perform multi-national reporting, automatic currency translation is a requirement. Infor ERP SyteLine FRx Currency Translation fulfills this need. Users can create multiple exchange rate tables using, or they can access the exchange rate table information maintained in their general ledger. The Monthly Rates Table supports month-end and monthly average rates for automatic or manual currency translation

Infor takes pride in the 20 years of experience we have in the manufacturing industry. Using our deep base of industry knowledge and proven communications and planning applications, we help suppliers and manufacturers achieve their business goals.

We are passionately focused on providing comprehensive solutions that meet the unique challenges of the manufacturing industry on a global scale. Our solutions are comprehensive, open and modular, giving you the optimal choices to meet today's challenges and leverage tomorrow's opportunities.

calculations in their reports, so they do not have to accumulate and average their daily rates. Translation can be defined on a row-by-row basis, and exchange rates can reflect daily "spot" rates, historic rates, and triangulation currencies. Additionally, they can calculate annual rates, streamlining the maintenance in the Column Layout when they create new reports. Infor ERP SyteLine FRx Currency Translation allows them to create financial statements based upon the "home" currency set up in their general ledger, and translate it into other currencies for reporting and further analysis, while the data in their general ledger remains untouched.

Infor ERP SyteLine FRx Currency Translation is recommended for the finance professionals who need to create, generate, and distribute financial reports translated into other currencies.
